Note: Attention! As a component of the whole, the EMC performance of the final product is not only decided by the driver, even if the driver is well-designed and fulfil all the required compliance. The final equipment manufacturers must re-qualify EMC Directive on the complete product. The J version is externally input, and the user on the output line needs a set of nickel-zinc magnetic ring(T25.9*12.8*28.5C DN85H Dongzi RoHS) and fixed on the online material.

Dimming function

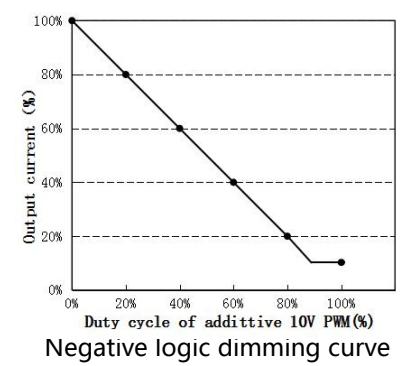

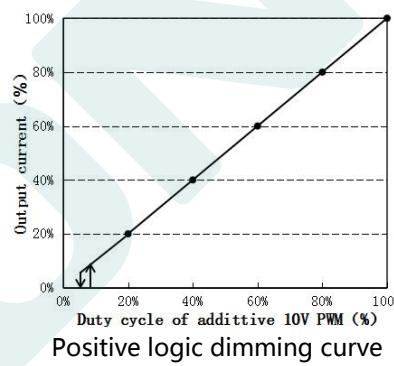

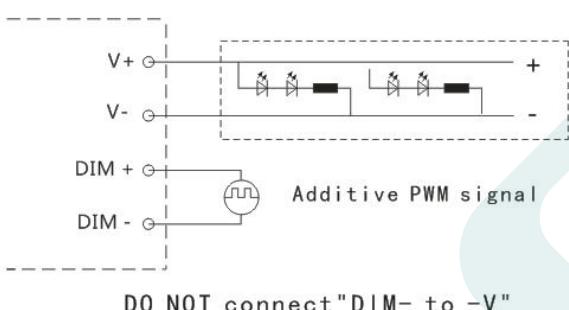

※ Three-in-one dimming function

- A. To adjust the output current, applying one of the three methods between DIM+ and DIM- : a resistor of 0-100K, or any voltage of 0-10V , or a PWM signal with amplitude of 10V.
- B. output current of dimming port: 100uA (typical value).

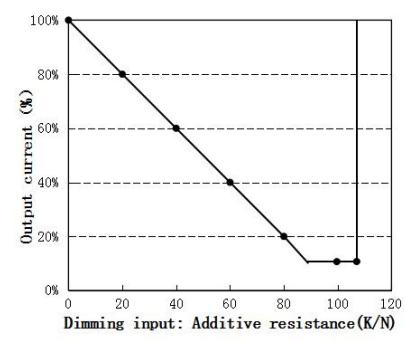

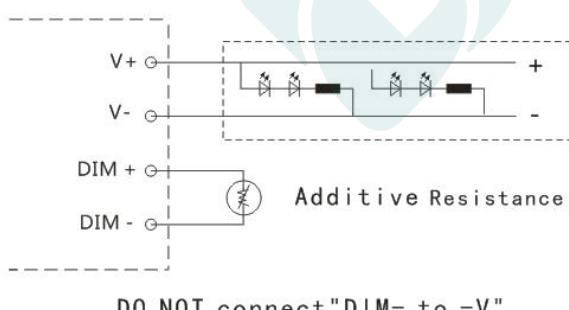

◎ With 0-10V dimming voltage(for both logic,negative and positive):

◎ With 10V PWM signal (Frequency range : 300Hz-2K Hz) :

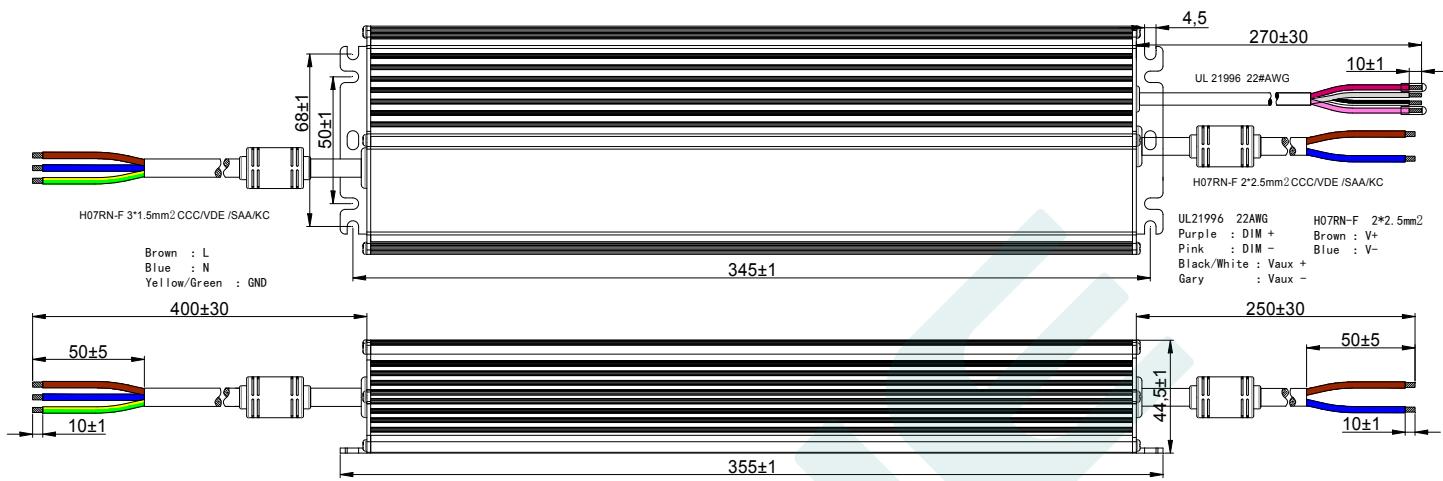

◎ With an additional 0-100K resistor:
