Input Overvoltage Protection	Off mode,when the input voltage is higher than 600AC, the power supply turns off the output. When the AC voltage returns to the normal voltage of 380VAC, the power supply returns to normal operation.
Over Load Protection	Hiccup restart mode,after abnormal load conditions are removed, the system automatically recovers
Over Voltage Protection	Hiccup mode, automatically recovered after abnormal conditions are removed
Over temperature protection	Self-restorable type,when the casing temperature is greater than 95°C, the output power decreases with the casing temperature increasing.

Note:

1. Unless otherwise specified, all specifications are measured at 380Vac (50Hz) input, rated load and ambient temperature of 25°C.
2. Including setting error, linear adjustment rate and load adjustment rate.

3. Dimming off applies to positive and negative logic. For other requirements, contact technical support.

Caution:

1. It is recommended to design LED beads in series first and then in parallel.
2. There is no excessive heat-dissipating copper foil left on the aluminum substrate.
3. The creepage distance of the aluminum substrate wiring > 5.6mm.
4. The creepage distance between LED+ and LED- on the aluminum substrate > 2.5mm.
5. The insulation level of the LED lamp board should meet the requirements of reliability design. The recommended withstand voltage between the LED lamp beads and the aluminum substrate is 100% full inspection > 3.5KVAC.
