Dimming operation

Three-in-one dimming function (S version only)

- A. To adjust the output current, applying one of the three methods between DIM+ and DIM- : a resistor of 0-100K, or any voltage of 0-10V , or a PWM signal with amplitude of 10V.
- B. output current of dimming port: 100uA (typical value).

• 0-10V dimming:

• PWM dimming (300Hz-2kHz) :

• Resistor Dimming (0-100K) :

Note: It is recommended to use 0-10V and equivalent three-in-one dimming. By default, it can be dimmed off, but it cannot achieve 0.5W standby power.
